

**Client Data Set**

**Submission Guide**

**for Fiscal Year 2009**

**Updates:**

4/26/07 - DCM - Insure Error and Completeness criteria listed on the Client Data Set Table Layout and on the Input Record Format match the Editor. The following minor corrections were made:

- Incomplete criteria was expanded to show codes 6 / 7 as well as 8 as incomplete
- Some conflicting fields leading to Possible errors were explained in more detail
- Indicate that Fatal Errors count against Accuracy
- Invalid dates will be set to NULL / invalid codes in other fields will be set to "Not Collected"

NOTE: Several fields are required for SA Admission / Discharge reporting. These fields should be validated and updated as often as possible, even monthly. These fields include: Drug Type Codes Primary, Secondary, Tertiary; Frequency of Use Primary, Secondary, Tertiary; Living Arrangements; Employment Status; Number of Arrests in Past 30 Days

# Client Data Conventions

## Field Types

1. Numeric (#) Must contain only numeric characters 0-9
2. Alpha/Numeric (X) Can contain both letters and numbers (letters should always be in upper case)  
No special characters like dash, slash, or commas unless specifically authorized.

## Field Formats

1. # - numeric digit
2. X - any character (letters and numbers allowed, letters in upper case only)
3. YYYYMMDD - numeric date field in the form:  
YYYY - four digit year  
MM - two digit month  
DD - two digit day

Note: Dates should contain only numeric characters. Do not enter date separators, such as "/" or "-" in these fields.

## Standard Codes

Standard coding methodology is used throughout the data set whenever possible. Some examples are:

1. For fields requiring a "Yes" or "No", the codes are:  
0 No  
1 Yes
2. Codes for "Not Applicable" are dependent on field length, and always end in "6". This code is used to indicate that the field does not apply to the client. An example would be the Pregnant Women field for male clients. Those fields which have Not Applicable as valid codes use the coding convention below:

<u>Code</u>	<u>Field Length</u>
6	1
96	2
etc.	

3. Codes for "Unknown" are dependent on field length, and always end in "7". RDMC would prefer that this code NOT be used unless the Center wants to capture the difference between Unknown and Not Collected. The Not Collected code is the recommended code for this information. Both codes will be treated in the same manner. Both could count against the Completeness Standard. Those fields which have Unknown as valid codes use the coding convention below:

<u>Code</u>	<u>Field Length</u>
7	1
97	2
etc.	

4. Codes for "Not Collected" are dependent on field length, and always end in "8". This code is used by TEDS to indicate a field that is not collected. Kentucky uses it to indicate that the data was not collected from the client, but that the field is one that Kentucky collects. Both this code and the previous code are treated in the same manner. Both could count against the Completeness Standard. Those fields which have Not Collected as valid codes use the coding convention below:

<u>Code</u>	<u>Field Length</u>
8	1
98	2
etc.	

3. Codes for "Other" are also field length specific, but always end in "9".

<u>Code</u>	<u>Field Length</u>
9	1
99	2
etc.	

## Historical Client Guidelines & Data Submission Procedure

The client dataset information is captured on a monthly basis; i.e., the dataset will capture up to 12 months worth of data per client per fiscal year.

This will allow us to effectively track changes in client dataset information. Also, events and client service information will be more closely tied to accurate and timely information that will represent a “true” picture of the information submitted.

There are two possible resubmission methods for the client dataset:

1. Resubmission of the complete client data file, with data file names ending in CS or CR.
2. Use the deletion method for record(s) in error, for a particular submission month. The user shall provide a new code in **field number 7, Provider Identifier**, to signal that the record is to be removed from that month's dataset:

**Field Number:** 7

**Field Name:** Provider Identifier

**Code:** “Delete”

**Type:** Alpha

**Length:** 6

All of the records to be deleted in a month need to be included in a “CX” file with the following naming convention: <region number><month><year>CX.DAT.

N/A and ~~strike through~~ indicate fields no longer required, edited or considered

New field 87 will NOT be counted for Accuracy or Completeness during the first FY of activity.

Fields after 87 are for internal use only.

-----

Note: Input records completely replace existing records for matching Year and Month. See previous note on how to remove individual records.

Under the error column;

F = Fatal error - field vital to record, entire record rejected, no further edit checks are performed

G = General error - invalid value, data recorded for reporting purposes, value changed to Unknown / Not Collected code ( 8 / 98 / etc )

NOTE: NOT counted in completeness accumulation

P = Possible error - value in this field should be reviewed as it is outside normal bounds or is in conflict with another field

A = Accuracy - this field checked for accurate values

C = Completeness - this field checked against Not Collected codes **for Status 1 clients ONLY**

NOTE: Some fields are considered for Completeness ONLY if the client's diagnosis puts them in the appropriate program. See the Incomplete Criteria column

NOTE: Only the following fields are REQUIRED for Client Status = 2 or 3, however, all fields containing data for status 2 clients will be edited;

- Region Number, Client ID, System Reporting Date (Month, Year), Client Status Code.

**All other fields will be accepted ONLY if valid data is present. The only errors that may occur related to the other fields are when two fields containing valid data are in conflict, such as Pregnant Male clients and duplicate diagnostic codes.**

-----

Note: For the purpose of cross-checking fields,

- if the client has ANY Axis Diagnosis that is a Mental Health diagnosis, then the client is a "MH" client;
- if the client has ANY Axis Diagnosis that is a Mental Retardation diagnosis, then the client is a "MR" client;
- if the client has ANY Axis Diagnosis that is an Alcohol or Drug diagnosis, then the client is a "SA" client;

(Clients may have dual or triple diagnosis)

NOTE: Fields that MAY be blank, but contain valid data, will be edited AND considered for Accuracy. This includes non-required fields for Client\_Status = 2 records. These fields are NOT indicated with "A" in error column

-----

If total inaccurate fields / total possible accurate fields > 5%, then Acceptance = FAIL

If the number of incomplete values in a field / total records requiring this field > 5% for ANY of the fields considered for Completeness, then Completeness = FAIL

If submission received after the end of the month following the month for which the data applies, then Timeliness = FAIL
